

EVAPORATIVE COOLERS FOR FITMENT CENTRES

With so many fitment centres to choose from today..... It is important to make your clients visit a pleasant one. People tend to stay longer and purchase more when the conditions are comfortable. When people get hot, they get tired and loses interest.

Time is money Turnaround time is crucial in a fitment centre. Therefore, you cannot afford low productivity and a decrease in fitment accuracy, due to uncomfortable hot working conditions.

Cooling your fitment centre can be achieved by either renting or investing in an H2O mobile cooler to control the summer heat within your fitment centre.
