

EVAPORATIVE COOLERS FOR GYMNASIUMS

Whether training indoors or outdoors sweating is normal... but when it is hot and uncomfortable, your workout will not be as effective. It can also lead to heat-related illnesses like heat cramps and heat exhaustion. To help people get the best workouts, even on the warmest days, it is important to provide effective cooling.

H₂O Evaporative coolers can be moved anywhere, where cooling is needed. The result will be cooler air when and where needed, to lower body temperature during or after a workout. Mobile coolers can be placed inside the gym or even outside on fields and other training areas.
